

Call for Tenders

February 5th, 2018

Marine-EO is launching the Request for Tenders to interested companies and consortia around Europe to bid in one or more of the thematic areas and services available.

In this sense, we would like to count on your entity/institution to join efforts in disseminating this opportunity to invite all interested parties to present their offers to bridging innovative downstream earth observation, and Copernicus enabled services for the integrated maritime environment, surveillance and security.

The challenge

The aim of Marine-EO procurement is to develop, test and validate a bundle of innovative EO downstream services bringing incremental or radical innovations in the field of maritime awareness leveraging on the existing Copernicus Services (i.e. CMEMS, Security) and other products from the Copernicus portfolio. In addition, a series of “support” services will standardize the way that EO is used for maritime awareness with regards to operational, technological, semantic and legal interoperability issues. The Marine-EO procurement seeks to cover the sea-basins of Mediterranean, Atlantic, and Arctic, by adapting Copernicus data and information in order to meet the demand of the buyers group.

The total **budget for the PCP is 2.769.106€** (VAT excluded)

Are you interested?

Download all Tender Documents that you can find in <https://marine-eo.eu/call-tender> and submit your proposal in **English** in <https://www.dgpm.mm.gov.pt/marine-eo> .

The innovative EO downstream services are divided in two thematic areas that contractors can submit their offers on:

Thematic Area 1 SATOCEAN: Copernicus Marine Environment Monitoring and Climate Change

Thematic Area 2 SATSURVEILLANCE: Copernicus Security

More Information you can find the Marine-EO [website](#) .

Timelines:

3 February 2018 | Tender Publication

9 April 2018 | Tender Submission Deadline, 23:59 CET

18 June 2018 | Start of phase 1 Solution Design

16 November 2018 | Start of phase 2 Prototype

16 August 2019 | Start of phase 3 Original development and validation and testing of a limited set of first products or services.

15 September 2020 | End of phase 3
